

ZTrust SSO

DATASHEET

ZTrust SSO is a comprehensive cloud-based identity solution that streamlines authentication and access management for the modern workforce. By providing a centralized authentication authority, ZTrust SSO enables seamless, secure access across applications, directories, and devices. With features like adaptive multi-factor authentication (MFA), user lifecycle management, and extensible integrations, ZTrust SSO empowers organizations to enhance productivity, reduce security risks, and keep pace with evolving business needs.

Boost Employee Productivity

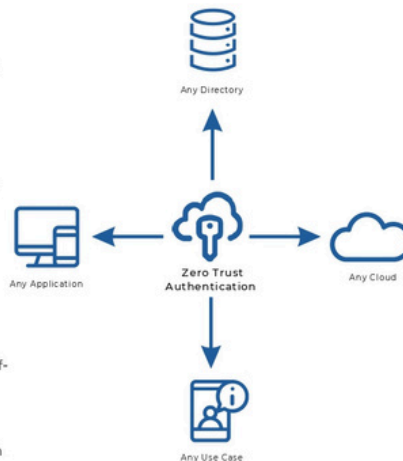

- Single sign-on (SSO) across all applications via a customizable employee portal
- Consistent, frictionless authentication experiences on any device
- Self-service capabilities for password resets and device management

Strengthen Security Posture

- Adaptive multi-factor authentication (MFA) for risk-based access control
- Passwordless authentication options to minimize reliance on passwords
- Contextual security policies leveraging behavioral analytics and threat intelligence

Simplify Identity Management

- Centralized administration console with delegated access and self-service capabilities
- Automated user provisioning and deprovisioning across connected systems
- Flexible directory integrations to establish a single source of truth for identities

Key Features

- Single sign-on (SSO) across all applications
- Multi-factor authentication (MFA)
- Password Management
- Brute Force Detection
- Role Based Access Control
- Extensive integrations with applications and directories
- Heavily Customisable
- Flexible deployment options

Capabilities & Benefits

SSO & Password Management:

Provide one-click access to all applications and empower users with self-service password management.

Brandable User Experiences:

Customize the look and feel of user-facing screens and notifications to align with your brand.

Adaptive MFA: Implement intelligent, risk-based authentication policies that assess contextual factors like device, location, and user behavior.

User Lifecycle Management:

Automate onboarding, offboarding, and attribute synchronization to ensure the right access at the right time.

Authentication Authority: Unify authentication across directories, applications, and devices to enable consistent access experiences.

Centralized Administration:

Manage all aspects of authentication and access from a unified console, with granular access controls and auditing.

Extensive Integrations: Leverage out-of-the-box connectors and open standards to integrate with a wide range of applications, directories, and security tools.

Flexible Deployment: Deploy ZTrust SSO in any environment - public cloud, private cloud, or on-premises.

Standard
